14. ABSTRACT (Maximum 200 words):  This report documents the third year of a 5-year project to provide the U.S. Army Research Institute for the Behavioral and Social Sciences (ARI) short- and medium-term scientific and technical support in solving problems related to manpower and personnel. The three COMPRs programs are (1) quick reaction; (2) attitude and opinion surveys; and (3) medium term. During the third year of the contract, 14 delivery orders were initiated, 9 in the quick reaction program, 1 in the attitude and opinion survey program, 3 in the medium-term program, and one for contract administration. This report includes a summary of activities during the first three years of the contract, plus a very brief overview of each delivery order (including problem, objectives, status, results, bibliography, products, and planned documents and products).

## **Contract for Manpower and Personnel Research and Studies (Comprs) for the U.S. Army Research Institute for the Behavioral And Social Sciences--Annual Report: Year Three**

### **Introduction**

This report documents the first three years of a five year (two base years and three option years) project to provide the Army Research Institute (ARI) non-personal, short- and medium-term scientific and technical support services in the solution of problems related to manpower and personnel. The program is referred to as the Contract for Manpower and Personnel Research and Studies (COMPRS). HumRRO's primary responsibilities are to administer the COMPRS for ARI under firm fixed-priced contracts by managing three inter-related tasks: (1) managing the COMPRS program in accordance with established operating procedures, (2) receiving and processing individual Statements of Tasks from ARI, and (3) managing, reporting project progress, and documenting delivery order completion.

There are three programs under COMPRS. They are summarized below and are described in detail in Appendix A:

- **Quick Reaction (QR) Program** - Intended to provide ARI responsive, short-term research or studies and analysis dealing with manpower and personnel issues for which ARI in-house capability is not available. Each of the QR Program delivery orders (DOs) shall be completed within a period of time specified in the DO, with the maximum allowable completion normally being within 12 months of the date of the DO.
- **Attitude and Opinion Survey (AOS) Program** - Intended to give ARI the ability to conduct surveys to provide information for accession and force management decision-making. Each of the AOS Program DOs shall be completed within a period of time specified in the DO, with the maximum allowable completion normally being within 12 months of the date of the DO or 18 months if OMB approval is required.
- **Medium-Term (MT) Program** - Intended to give ARI the ability to conduct a limited number of research efforts or studies and analyses whose duration would not normally exceed 24 months after the contractor receives the DO.

### **Summary of Activities**

During the first year of the contract, 22 delivery orders were initiated, to include DO# 0001 which provides for the overall management of the COMPRS. The remaining 21 delivery orders were divided among the three program areas as follows: QR Program, 12 DOs; AOS Program, 7 DOs; and MT Program, 2 DOs. During the second year of the contract, 10 delivery orders were initiated. Eight of these DOs were in the QR program and two were in the MT program. In the third year of the contract, 14 delivery orders were initiated. DO #0033 provides overall COMPRS management for the three-year option period. Of the remaining delivery orders, 9 were in the QR program, 3 were in the MT program, and 1 was in the AOS program. Table 1 summarizes delivery order activity for the first three contract years.

**Table 1. Summary of Delivery Order Activity**

	Year 1	Year 2	Year 3	Total
Number DOs initiated	22	10	14	46
Contract administration	1	0	1	2
Quick reaction	12	8	9	29
Attitude/opinion survey	7	0	1	8
Medium term	2	2	3	7
Number active DOs (as of 31 June 1996)	8	7	18	n/a

Summaries for each delivery order initiated during the first three years of the contract follow. Each summary provides the following information:

- The delivery order number and title.
- The program area.
- The delivery order contracting officer's representative (DO-COR), assistant DO-COR, if one is assigned, and the contractor's project director.
- A statement of the problem.
- The objectives of the delivery order effort.
- The delivery order status (either ongoing or completed), to include the dates.
- The results (if completed).
- Three sections describing documents and products--a bibliography section, a products section, and a section on planned documents and products. These final sections include only the most significant documents and products, not the standard requirements of each delivery order, such as a management plan, data collection instruments, and the like. Each delivery order has a final report associated with it.

These summaries are not intended to provide significant detail about each delivery order; that information can be provided by the DO-COR upon request. The summaries are intended to give a very brief overview of each effort as well as to provide a snapshot of the contract's activities.

<b>DO# 0001</b>	<b>Title:</b> Contract Administration/Reports/Other Deliverables
<b>Program Area</b> <b>QR</b> _____ <b>AOS</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Dr. David Witter <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Deirdre Knapp <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> Providing information on manpower and personnel issues to Army decision-and policy-makers is often a complex, dynamic, multi-stage, iterative process. The accuracy and timeliness of information provided to decision makers are of paramount importance in affecting the quality of decisions and policies. Over the next decade, the U.S. Army will experience an increasing requirement to bring individuals into the Army who are trainable in a wide variety of skill areas. To meet and maintain its high quality manpower needs of the 1990's, the Army will have to develop and implement programs that allow it to locate, assess, assign, and use human resources more efficiently and effectively than it ever has before. As new Army policies are being developed to enhance the Army's ability to man the force, the Army needs programs of research and studies that will provide a quick response mechanism to gather and analyze data on the expected or actual short-term effectiveness of those policies.</p> <p>Scientific and technical support services are being used that lead to the development and implementation of programs of research and studies on the expected or actual effectiveness of Manpower, Personnel, and Training (MPT) programs. These efforts are part of ARI's MPT program to man the force by conducting research and studies to improve the Army's ability to recruit, identify, assess, classify, assign, lead, train, and maintain the personnel required for the Army.</p>	
<p><b>Objectives:</b> The objectives of this delivery order were to administer the Contract for Manpower and Personnel Research and Studies (COMPRS) for ARI under firm fixed-priced contracts by managing three inter-related tasks: (1) managing the COMPRS program in accordance with established operating procedures, (2) receiving and processing individual Statements of Tasks from ARI, and (3) managing, reporting project progress, and documenting delivery order completion.</p>	
<p><b>Status:</b> Completed (July 1, 1993-June 30, 1995)</p>	
<p><b>Results:</b> Described further under each Delivery Order Summary</p>

<b>DO# 0002</b>	<b>Title:</b> Evaluation of the Effectiveness of Job Assistance Centers in the Army Career and Alumni Program (ACAP)
<b>Program Area</b> <b>QR</b> <input checked="" type="checkbox"/> <b>AOS</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Dr. Joan Harman <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Robert Sadacca
<b>DO Summary</b>	
<b>Problem:</b> The Army required a proposal to evaluate the effectiveness of Job Assistance Centers that are part of the Army Career and Alumni Program (ACAP). The proposal was needed to determine the level of resources required to carry out a full-scale evaluation and to allocate funding and data sources.	
<b>Objectives:</b> The objective of this project was to provide the Army Career and Alumni Program with a comprehensive evaluation plan that reflects the value to the Army and to the civilian sector of the efforts of Job Assistance staff members to prepare individuals to look for jobs.	
<b>Status:</b> Completed (July 21, 1993-August 13, 1993)	
<p><b>Results:</b> Job Assistance Centers (JAC) provide assistance to Army service personnel, civilian employees, and their family members who are transitioning from military jobs to employment in the civilian sector. Services provided by the JAC are designed to prepare individuals for a successful job search. The centers run under auspices of the Army Career and Alumni Program (ACAP) which is part of the DoD Transition Assistance Program. The National Defense Authorization Act of 1991 requires that the Departments of Defense, Labor, and Veterans Affairs provide job transition assistance to military and civilian personnel who would lose their jobs due to installation closures and the downsizing and consolidation of military units. The JAC program is the Army's response to that mandate.</p> <p>The Department of Labor (DoL), also in response to the Congressional mandate, has established Transition Assistance Offices (TAO) near DoD installations nationwide. The JAC and TAO often serve the same Army and other DoD installations. The programs of assistance provided by the JAC and TAO, however, are designed to complement each other. The DoL program provides group seminars or classes designed to increase the general job search skills of the separating service personnel. The JAC, on the other hand, provide more individualized counseling services geared to the particular vocational experience and plans of the transitioning soldiers, Army civilians, and their family members. Questions have been raised about the cost effectiveness of maintaining the JAC program at locations where the DoL program is also available (the DoL program is not available overseas). Specifically, the added value of the JAC program to transitioning Army personnel and their family members has been questioned by the DoD Inspector General. Essentially, this evaluation of the JAC is being conducted to determine the answer to three basic questions:</p> <ol style="list-style-type: none"> <li>1. How do JAC clients compare with non-JAC clients in regard to post-separation employment?</li> <li>2. Which JAC services have the most impact on success in achieving employment?</li> <li>3. Considering the additional costs of providing JAC services, are the added benefits derived from the program cost effective?</li> </ol> <p>The first question can be answered in a number of ways depending upon the aspect of employment/unemployment examined. Several types of program criterion or outcome measures could be obtained on separate samples; these measures would constitute the dependent variables in the planned multivariate analyses. The analyses would focus on differences in post-separation employment of recipients and non-recipients of JAC services while controlling for personal and family factors and the military job experience of the sampled individuals. The answer to the second question would also be answered through multivariate analyses. Whether or not individuals received given JAC services can be ascertained from the JAC database and confirmed in follow-up interviews. Variables measuring receipt/nonreceipt of particular services can be created. The effects (direct, indirect, and total) of these measures on the outcome measures can then be ascertained within the context of model(s) that attempt to capture the interrelationships among all the variables of interest. The third question may be the most difficult to answer. Assuming that the multivariate analyses indicate that individuals who received JAC services are more successful in obtaining post-separation employment, the employment differential or program benefits obtained must be evaluated in terms of the monetary costs of providing the job assistance services.</p>

<b>DO# 0003</b>	<b>Title:</b> Surveys of Nurses and Nursing Students
<b>Program Area</b> <b>QR</b> _____ <b>AOS</b> <u>  X  </u> <b>MT</b> _____	<b>DO-COR:</b> Dr. Ronald B. Tiggie <b>DO-ACOR:</b> CPT Mike Stehlik <b>Project Director:</b> Dr. Peter F. Ramsberger
	<b>DO Summary</b>
<p><b>Problem:</b> The Army Nurse Corps (ANC) comprises about 4,000 Registered Nurses (RNs). To maintain readiness, approximately 500 new recruits must be enlisted each year. The Army needed to obtain attitudes and perceptions of employed civilian nurses and nursing students toward serving in the Army Nurse Corps. The effects of Operation Desert Shield/Storm and military downsizing on attitudes were of particular concern. Data regarding the field of nursing and perceptions of the ANC among current and future RNs were required to accomplish this objective. This effort involved collecting survey data, analyzing data, and developing the database and supporting documentation.</p>	
<p><b>Objectives:</b> The objective of this project was to provide the Army with information on the nurse prospect market, by assessing attitudes and perceptions of nursing students and civilian nurses toward Army service. Comparative information about nurses' perceptions of military nursing and civilian nursing was needed to support Army advertising policy and enlistment incentive strategies in the post-Operation Desert Storm era. In addition, a literature review was conducted to shed further light on the status of nurses and their profession.</p>	
<p><b>Status:</b> Completed (July 29, 1993-September 30, 1994)</p>	
<p><b>Results: Literature Review.</b> A review of both the military and civilian literatures regarding the profession of nursing was conducted to provide a background for the surveys. Among the major findings was that the long touted shortage of nurses appeared to have abated starting in the early 1990s. At that time, vacancy rates began to fall and hiring freezes were put into place at many institutions. There were several reasons for this, including shorter hospital stays, more out-patient and alternative care settings, and the movement within the health care industry to hold down costs. Even in the face of this development, however, the number of nursing programs and graduates was increasing. In part this may be attributable to an increase in salaries for those in the field, although there is still concern that nurses do not have opportunities to achieve substantial increases in earnings over the course of their careers. The field of nursing is in a state of flux, and will likely remain so until the major questions regarding the provision and financing of health care are answered.</p> <p><b>Survey of Nurses and Nursing Students.</b> The results of the survey indicated that there was a great deal of similarity between nurses and nursing students in terms of their reasons for entering the field and positive and negative influences in that regard. Overall, nurses were satisfied with their field, although there were areas of significant dissatisfaction (e.g., the amount of paperwork). The level of familiarity with the Army Nurse Corps (ANC) was high, and many aspects of the ANC were attractive to both current and future RNs. However, the possibility of relocation, chance of serving in/around combat, prospect of weekend Reserve duty, and military lifestyle were seen by large proportions of each sample as being negative attributes of military service. Interest in enlisting in the ANC was fairly low among both groups, with significant portions of respondents indicating that the probability that they would join was smaller following Operations Desert Shield and Desert Storm.</p>

<b>DO# 0004</b>	<b>Title:</b> Gender Integration of Basic Training
<b>Program Area</b> <b>QR</b> <input checked="" type="checkbox"/> <b>AOS</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Dr. Jacqueline A. Mottern <b>DO-ACOR:</b> Dr. Morris P. Peterson <b>Project Director:</b> Dr. Shelley Perry <b>DO Summary</b>
<b>Problem:</b> The U.S. Army wanted to study the attitudes of trainees and cadre toward gender-integrated and same gender basic entry training. Prior research has evaluated the performance of basic entry trainees in gender-integrated and same gender squads. However, the research did not measure the attitudes and opinions of either the trainees or training cadre of gender-integrated and same gender basic training squads.	
<b>Objectives:</b> This effort had the following objectives: (1) to collect information on the attitudes and opinions of soldiers and training cadre about basic entry training in same gender and gender-integrated squads; (2) to describe training activities in the squads; (3) to assess performance by females and males in the squads; and (4) to identify changes--if any--in attitudes towards training and the performances of females and males.	
<b>Status:</b> Completed (August 2, 1993-March 31, 1994)	
<p><b>Results:</b> Male and female soldiers entered basic training centers (BCT) with a strong sense of pride and commitment to the Army and a positive opinion about Army career opportunities and values. Although, overall, males seemed a bit more confident, both genders expressed a high degree of confidence in their ability to accomplish specific BCT events successfully, as well as cope with the demands of a military environment.</p> <p>BCT appears to have been a very positive event for the soldiers in the sample. Most (between 50 and 80 percent), regardless of their self-reported entry-level ability, reported some type of improvement as a result of the training. Response differences across the eight postsurvey composites appeared to be associated more with the gender of the soldier than the type of training (i.e., single-gender or gender-integrated) received. Female responses were significantly more positive than males in the areas of men and women in combat and leadership, affirmative pressure from drill sergeants, perceptions of gender differences, and impact of gender integration. Male responses were significantly more positive than females in the areas of Army career opportunities and values, and platoon teamwork/cohesion. No overall gender differences were noted for responses to pride and commitment to the Army, or with confidence in drill sergeants.</p> <p>Comparisons of soldiers receiving the single-gender BCT to soldiers receiving the gender-integrated BCT revealed significant differences only in the following four areas: men and women in combat and leadership, confidence in drill sergeants, affirmative pressure from drill sergeants, and perceptions of gender differences. The responses of the single-gender trained group were more positive in all four of these areas. Single-gender males, compared to males trained in the gender-integrated environment, were consistently more positive in the areas of platoon teamwork/cohesion, confidence in drill sergeants, affirmative pressure from drill sergeants, and perceptions of gender differences. These were the only significant differences noted when comparing the two groups.</p> <p>Females trained in the gender-integrated units were significantly more positive than females trained in single-gender units in their response to items addressing platoon teamwork/cohesion, confidence in drill sergeants, and perceptions of gender differences. Single-gender trained females were more positive about affirmative pressure from drill sergeants.</p> <p>Changes in soldier attitudes/opinions, as a result of BCT, were measured in the following areas: Army career opportunities and values, pride and commitment to the Army, and men and women in combat and leadership. Significant changes in soldier attitudes/opinions were observed across all three of these areas. Overall, except for females who did not record a change in attitude/opinions, shifts were positive with regard to Army career opportunities and values. All changes were in a negative direction for pride and commitment to the Army, and men and women in combat and leadership. No changes in soldier career plans were noted.</p> <p>Training cadre were much more positive toward the conduct of BCT in a single-gender environment than a gender-integrated environment. They recommended that gender integration of the soldier's initial entry training be initiated at the time of advanced individual training, not during BCT.</p>

<b>DO# 0005</b>	<b>Title:</b> Design and Develop Prototype Army Officer Personnel Inventory, Cost and Compensation (OPICC) Model
<b>Program Area</b> <b>QR</b> <input checked="" type="checkbox"/> <b>AOS</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Dr. Peter M. Greenston <b>DO-ACOR:</b> LTC Brad Loo <b>Project Director:</b> Dr. Patrick C. Mackin <p style="text-align: center;"><b>DO Summary</b></p>
<p><b>Problem:</b> In the present downsizing environment, brought on by diminished external threats and lower defense budgets, there is a pressing (and on-going) need for an improved analysis capability within the Army for personnel and manpower policy and officer management. The 7th QRMCI has proposed changes in compensation policy. The implications of these changes need to be addressed. For example, the impact upon officer quality and experience distributions of a 15 year retirement program should be assessed.</p> <p>In moving toward a smaller force structure, the potential impacts of various proposals have to be understood, such as early separation incentives, changes in promotion rules and practices, and signing bonuses following completion of initial service obligation. There is a continuing need to ascertain the impact of various military compensation proposal changes, taking into account projected labor market conditions and civilian wage growth.</p> <p>To meet this need the Army requires a PC-based policy analysis model in which compensation and other personnel policy changes can be expressed in model variables and/or parameters, the effects upon retention determined, consequent impact upon inventories projected, and the impact upon personnel costs estimated.</p>	
<p><b>Objectives:</b> The objective of this project was to estimate a multi-period econometric model of Army officer retention for the OPMD officer force and to design, code, test, and implement a PC-based policy analysis tool suitable for examining the effects of compensation and other personnel policy changes upon the inventory of Army officers and for predicting these effects over a six-year projection horizon.</p>	
<p><b>Status:</b> Completed (August 27, 1993-February 17, 1995)</p>	
<p><b>Results:</b> Project staff successfully estimated a thirteen-period panel probit (ACOL-2) retention model for the Army OPMD officer force. The model used data on voluntary retention decisions from FY1979 through FY1992 and years of service 3 through 15. The results of this estimation were incorporated in the Officer Personnel Inventory, Cost and Compensation (OPICC) inventory-projection model.</p> <p>The OPICC model allows for a variety of policy scenarios to be manipulated by users, including future pays, severance options, retirement, unemployment, inflation, and accessions. In addition, users may model promotion behavior using three different approaches. The model explicitly tracks inventory across four dimensions: years of service, pay grade, time in grade, and remaining obligation. Finally the model automates the inventory update process to allow ARI to build new inventories from a raw extract of the Officer Master File. Model validation included running the model against historical retention behavior to compare predicted and observed results. ARI analysts and DCSPER personnel participated in training sessions to gain an understanding of OPICC's operation and capabilities.</p> <p>A software utility was also developed to allow ARI analysts to access three research data bases--the OLRDB, EPRDB (25% sample), and EPRDB (100% sample)--on CD-ROM.</p>

<b>DO# 0006</b>	<b>Title:</b> Evaluation of Job Assistance Centers in the Army Career and Alumni Program.
<b>Program Area</b> <b>QR</b> _____ <b>AOS</b> <u>  X  </u> <b>MT</b> _____	<b>DO-COR:</b> Dr. Joan Harman <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Janice Laurence <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> The Army needs to evaluate the effectiveness of Job Assistance Centers (JAC) that are part of the Army Career and Alumni Program (ACAP). This work entails interviewing DoD individuals who have been separated from their military or civilian jobs about their employment status. Job assistance centers provide assistance to Army service personnel, civilian employees, and their family members who are transitioning from military jobs to employment in the civilian sector. Services provided by the JAC are designed to prepare individuals for a successful job search. The centers run under auspices of the ACAP which is part of the DoD Transition Assistance Program. The National Defense Authorization Act of 1991 requires that the Departments of Defense, Labor, and Veterans Affairs provide job transition assistance to military and civilian personnel who would lose their jobs due to installation closures and the downsizing and consolidation of military units. The JAC program is the Army's response to that mandate.</p> <p>The Department of Labor (DoL), also in response to the Congressional mandate, has established Transition Assistance Offices (TAO) near DoD installations nationwide. The JAC and TAO often serve the same Army and other DoD installations. The programs of assistance provided by the JAC and TAO, however, are designed to complement each other. The DoL program provides group seminars or classes designed to increase the general job search skills of the separating service personnel. The JAC, on the other hand, provide more individualized counseling services geared to the particular vocational experience and plans of the transitioning soldiers, Army civilians, and their family members. Questions have been raised about the cost effectiveness of maintaining the JAC program at locations where the DoL program is also available (the DoL program is not available overseas). Specifically, the added value of the JAC program to transitioning Army personnel and their family members has been questioned by the DoD Inspector General. This evaluation of the JAC was conducted to determine the answer to three basic questions:</p> <ol style="list-style-type: none"> <li>1. How do JAC clients compare with non-JAC clients in regard to post-separation employment?</li> <li>2. Which JAC services have the most impact on success in achieving employment?</li> <li>3. Considering the additional costs of providing JAC services, are the added benefits derived from the program cost - effective?</li> </ol>	
<p><b>Objectives:</b> The objective of this project was to provide ACAP managers with data that reflect the value to the Army and to the civilian sector of the efforts of JAC staff members to prepare individuals to look for jobs outside of DoD. The data will permit ACAP to project program requirements and allocate appropriate resources to meet future needs.</p>	
<p><b>Status:</b> Completed (September 14, 1993-May 31, 1995)</p>	
<p><b>Results:</b> As part of an ACAP-sponsored outcome-based evaluation of JAC, approximately 3,000 servicemembers, Army civilians, and spouses of servicemembers who transitioned between October 1, 1992 and September 30, 1993 participated in Computer-Assisted Telephone Interviews (CATI) late in 1994. They were asked about transition and job search assistance received and post-separation employment and other, less tangible outcomes such as civilian job satisfaction and attitudes toward the military. The primary outcome measures were annual earnings, receipt of unemployment compensation, ratings of preparedness for the job market, civilian job ratings, and ratings of current financial condition relative to pre-separation.</p> <p>After controlling for individual and military demographics and background factors, participation in job search assistance services such as those offered through JAC was related to subsequent success in the civilian job market. As the number of and satisfaction with services increased, so too did preparedness for the job market, positive regard for the military as a career, earnings, and post-transition job ratings. Given the predilection to favor monetary benefits over less tangible, psychological effects, the finding that earnings increase as a function of the number of job assistance services received at a far greater rate than the cost of providing such services supports the continuance of such programs for exiting military members, their spouses, and Army civilians.</p>

<b>DO# 0007</b>	<b>Title:</b> Army Tests, Evaluations, and Experimentation with Army Combat Division Structure
<b>Program Area</b> <b>QR</b> <input checked="" type="checkbox"/> <b>AOS</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Dr. T. Owen Jacobs <b>DO-ACOR:</b> Dr. Carlos K. Rigby <b>Project Director:</b> Mr. James H. Harris <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> The U.S. Army is in a period of transition unmatched by any other period in history. Military history records many examples of "build-up to meet threat/build-down when threat no longer exists." But no where is there any record of a transition period that had to deal with a geo-political situation in which the U.S. constituted the single, dominant global military force with known future requirements across a spectrum of possible conflicts, but with much higher focus on the lower end of the conflict spectrum. The Army's operations doctrine reflects the philosophies and procedures for fighting at the high end of the conventional portion of the war spectrum; however, that doctrine is being revised to reflect the expanded requirement to operate effectively in the new threat environment.</p> <p>Previous military doctrinal transitions have usually followed a cycle of: threat elimination, downsizing, emergence of new threat, emergence of new doctrine to meet that threat, and development of new military structures to execute the new doctrine in the new operational environment. These steps are not always sequential; when able to anticipate events, the Army can pursue some of these steps in parallel. That is the current case. Efforts toward developing new doctrine began nearly simultaneously with the first downsizing steps, and it seems probable that work toward developing new divisional structures will follow the publication of new operational doctrine, prior to completing downsizing. In that sense, the current downsizing presents an opportunity to restructure the force.</p> <p>Before presenting restructuring plans, however, a systematic compilation of previous restructuring test, evaluation, and experimentation literature needs to be made. Such a compilation, done systematically and interpreted in light of threats and operational doctrine then-existent, would appreciably aid in the anticipated restructuring work.</p>	
<p><b>Objectives:</b> The objective of this research effort was to locate, collect, catalogue, and abstract the available test, evaluation, and experimentation literature in the arena of military restructuring.</p>	
<p><b>Status:</b> Completed (September 15, 1993-June 15, 1994)</p>	
<p><b>Results:</b> The scope of the initiatives to be considered was determined through interviews with experts on division design. The principal expert was Mr. Robert Keller of Combat Developments, Force Design Directorate, Combined Arms Center at Fort Leavenworth, KS. Based largely on his recommendations, the focus was set on post-Vietnam initiatives in general and the following in particular:</p> <ul style="list-style-type: none"> <li>● Division Restructuring Study/Evaluation (DRS/DRE)</li> <li>● Army 86: Division 86 (Heavy) and Infantry Division (Light)</li> <li>● High Technology Light Division (HTLD)</li> <li>● Army of Excellence (AOE): Light Infantry Division (LID) and Heavy Division</li> <li>● Future Design: Trends and Recommendations</li> </ul> <p>As documents were collected, the pertinence of the Triple Capabilities (TRICAP) study became apparent and it was added to the list. The initial sources of documents were searches of the Defense Technical Information Center (DTIC) and interviews of design experts. One of the major results of the interviews was a very useful history by Major Glen Hawkins. Most of the documents were ultimately collected from four sites: (1) the Force Design Directorate (FDD), (2) Office of the TRADOC Historian, (3) the Army Development and Employment Agency (ADEA), and (4) the Test and Experimentation Command (TEXCOM) Technical Library.</p> <p>During the planning phase of the project, one of the authors--General (Retired) Edwin H. Burba, Jr.--outlined insights on the characteristics that define Army organizations. These characteristics were used as a framework in selecting documents for inclusion. The characteristics, along with an example of applying the characteristics to current divisions, are included as an appendix to the final report. Two hundred documents were reviewed.</p> <p>All the references cited in the report, as well as the summaries prepared, are contained in a separate database system that identifies all references by using relevant subject area terms. A database system called "askSam Systems" was used to compile the bibliographic information.</p>

<b>DO# 0008</b>	<b>Title:</b> 1991 Guard/Reserve Survey of Officers and Enlisted Personnel: File Weighting
<b>Program Area</b> <b>QR</b> _____ <b>AOS</b> <u>  X  </u> <b>MT</b> _____	<b>DO-COR:</b> Dr. Ronald B. Tiggie <b>DO-ACOR:</b> Ms. Dianne J. Murphy <b>Project Director:</b> Dr. Michael Wilson  <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> Administration of the 1991 Guard/Reserve Survey of Officers and Enlisted Personnel has provided the Defense Manpower Data Center (DMDC) and the Office of the Assistant Secretary of Defense for Reserve Affairs (OASD(RA)) the only DoD-wide survey examining the attitudes and opinions of National Guard and Reserve component personnel regarding mobilization for Desert Shield/Storm. It is important that drawdown and Force restructuring planning personnel receive the results of this survey as these data provide insight into the effects of mobilization upon members and their families. Delivery of survey results is dependent upon the performance of survey adjustment weighting of survey responses. This project was structured to provide the accomplishment of appropriate survey weighting and the production of reports documenting the production and use of survey adjustment weights.</p>	
<p><b>Objectives:</b> The objective of this project was to provide data and basic reports for policy planning by the full range of DoD offices concerned with military mobilization and its effect upon the families, as well as those concerned with related and general manpower policies.</p>	
<p><b>Status:</b> Completed (September 22, 1993-April 3, 1995)</p>	
<p><b>Results:</b> The primary deliverable from this project was a report summarizing the sampling methodology implemented for the 1991 Guard/Reserve Survey of Officers and Enlisted Personnel, the associated sampling issues, and proposed weighting adjustments to compensate for unequal sample selection probabilities among Reserve members. Activities documented in the report include the computation of sampling base weights, non-response adjustment of base weights, adjustment of survey totals to known population totals (raking), and production of replicate weights.</p>

<b>DO# 0009</b>	<b>Title:</b> Sampling Plan for the 1994 Health Care Survey of DoD Beneficiaries
<b>Program Area</b> <b>QR</b> _____ <b>AOS</b> <u>  X  </u> <b>MT</b> _____	<b>DO-COR:</b> Dr. Ronald B. Tiggie <b>DO-ACOR:</b> Dr. Tanya Guthrie <b>Project Director:</b> Dr. David Morganstein  <p style="text-align: right;"><b>DO Summary</b></p>
<p><b>Problem:</b> The Department of Defense is mandated by Congress to conduct an annual survey to evaluate its health care services. The overall purpose of the survey is to measure satisfaction in the range of competing health care services, general health status, and use of health care. There is interest in overall measures of satisfaction across the populations of active duty service members, dependents of active duty service members, retirees, and survivors, as well as interest in measures within particular catchment areas which can be used by individual military hospitals for quality assessment.</p> <p>The sampling frame for the study was based on the Defense Enrollment Eligibility Reporting System (DEERS) file. The information in this complete and extensive frame can be used to generate highly efficient sampling designs. This file does change over time as the status of individuals changes and new persons enter in. Thus, this sample is a 'snapshot' of the population at one particular point in time.</p>	
<p><b>Objectives:</b> The objective of this effort was to produce several sampling designs for the Survey of Beneficiaries study and to draft the supporting statement for the request for OMB approval of the data collection for dependents and survivors of retirees.</p>	
<p><b>Status:</b> Completed (September 28, 1993-January 24, 1994)</p>	
<p><b>Results:</b> The primary deliverables from the project were an analysis of alternative designs including EXCEL software which could be used to determine the most optimal sample design given a known set of inputs and desired design properties. Given a selected sampling plan with options chosen for a stratification system and a fully independent or partially dependent strata sampling plan, sample sizes were selected for the stratum. This was done using EXCEL spreadsheets. The spreadsheets provide base weights, which then need to be adjusted for nonresponse after the sample is collected.</p>

<b>DO# 0010</b>	<b>Title:</b> Economic and Occupational Analyses of 1992 DoD Reserve Surveys
<b>Program Area</b> <b>QR</b> _____ <b>AOS</b> <u>  X  </u> <b>MT</b> _____	<b>DO-COR:</b> Dr. Ronald B. Tiggie <b>DO-ACOR:</b> Dr. Mary Weltin <b>Project Director:</b> Dr. Michael Wilson <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> The 1992 Reserve Components DoD Survey of Officers and Enlisted Personnel and Their Spouses is part of a multi-year effort to collect important attitude and opinion data from men and women in each of the seven reserve components and all of their spouses. The results of this survey effort are used by the Office of the Secretary of Defense and each of the military services, including the Army Guard and Reserve, to formulate policies affecting the reserve force and their families. In addition to attitude and opinion data, this survey is an important and unique data source for civilian occupational information on the reservist. However, the data are provided on the survey in open-ended format and must be converted to the standard industry and occupational codes so they may be compared to other populations.</p>	
<p><b>Objectives:</b> The objective of this delivery order is to provide data and basic reports for policy planning by the full range of DoD offices concerned with military families, as well as those staff agencies concerned with related and general manpower policies. To address this need, the contractor will conduct two primary tasks: (1) specialized coding of reservists' civilian labor experience, and (2) targeted analysis of the 1992 Reserve Component Surveys in several content areas.</p>	
<p><b>Status:</b> Ongoing (September 28, 1993-August 31, 1996)</p>

<b>DO# 0011</b>	<b>Title:</b> Methods for the Evaluation of C2 Systems
<b>Program Area</b> <b>QR</b> <u>  X  </u> <b>AOS</b> <u>      </u> <b>MT</b> <u>      </u>	<b>DO-COR:</b> Dr. Sharon L. Riedel <b>DO-ACOR:</b> Mr. Robert S. Solick <b>Project Director:</b> Mr. Gene Jones <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> The challenges for successful wartime performance, and even the prevention of war, require careful examination of the human element in planning, decision making, and C2 systems. The ARI Fort Leavenworth Field Unit has been engaged in research on the behavioral aspects of corps through battalion-level C2 and is a key participant and contributor to the Battle Command Integration Program (BCIP). A primary role of ARI is to look at future C2 requirements, from the human perspective, by identifying and assessing better procedures, system capabilities, and training requirements. BCIP activities frequently seek research support on the behavioral aspects of C2 requirements, including development and assessment of user interface prototypes, requirements definition, and assessments of C2 system prototypes during development. In order to fulfill the requests to assess human performance in automated C2 systems, ARI is engaged in research to develop improved methods for assessment of C2 systems during development.</p>	
<p><b>Objectives:</b> The objectives of this effort were to support the validation of methods for life cycle evaluation of knowledge-based C2 systems and to document the "lessons learned" from conducting evaluations of the AirLand Battle Management (ALBM) Advanced Technology Demonstration (ATD) prototype.</p>	
<p><b>Status:</b> Completed (November 13, 1993-March 11, 1994)</p>	
<p><b>Results:</b> The following are lessons learned during the conduct of knowledge base and interface evaluations of an expert system under development for the Army.</p> <p><u>Knowledge Base Evaluations.</u> The development of an expert system based decision aid required the design and creation of a large collection of facts, algorithms, rules, and interfaces into an entity referred to as the Knowledge Base. Completed over time by interviewing experienced personnel and researching available reference material, the developer produced prototype software. At the direction of the Battle Command Battle Laboratory, an independent systematic review of the Knowledge Base was conducted to validate the underlying rules in order to provide feedback to the developers. This process involved learning the system in great detail and then presenting the entire process to a new group of experts to insure that the design and the products of the aid were valid. The experts were exposed to a detailed presentation of the workings of the decision aid and were queried on their reactions to both the process and the product in deliberate evaluation sessions. As a result of these evaluations, significant feedback was generated and provided to the developer with positive recommendations to correct perceived deficiencies. The following issues were raised: (1) problems encountered in becoming experienced with the system; (2) the impact of software development and its current status on conducting evaluations; (3) the solicitation and use of subject matter experts; (4) the design and conduct of the Knowledge Base Evaluation; (5) presenting the findings of the evaluation; and (6) general comments.</p> <p><u>Soldier-Machine Interface (SMI).</u> An important part of expert system development is the design of the SMI. A poorly designed interface decreases productivity, increases errors, increases confusion and boredom, increases cost and development time, and may even lead to users' refusing to use the system at all. The following lessons were learned from the SMI assessment: (1) inadequate documentation made learning the system difficult; (2) software development and its current status made learning the system difficult; (3) interface problems were identified after the interface design was implemented; (4) human factors input was not integrated into system development, resulting in a system that was poorly designed; (5) the state of software development and lack of interface design standards affected the SMI assessment; and (6) the assessment results should be conveyed in a constructive manner to ensure that deficiencies are corrected.</p>	
<p><b>Bibliography:</b>          Flanagan, J.P. &amp; Rappold, V. (1994). <u>Lessons learned from the knowledge based and soldier-machine interface evaluations</u>. Final Research Report. Falls Church, VA: CAE-Link Corporation.</p>

<b>DO# 0012</b>	<b>Title:</b> Improving Family Adaptation to the Stresses of Family Life
<b>Program Area</b> <b>QR</b> <input checked="" type="checkbox"/> <b>AOS</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Dr. D. Bruce Bell <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Dennis K. Orthner <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> Research on the ability of families to cope with the stresses of Army life has demonstrated that there are two types of adaptation: (1) adaptation to the marriage (called internal adaptation) and (2) family adaptation to Army events (called external adaptation). High internal adaption is characterized by soldiers (and their spouses) who say they are happily married, have good marital communication, and that the family is coping well. High external adaptation is characterized by soldiers (and their spouses) saying that they are satisfied with Army life, agree with Army values, and that they, as a couple, support making the Army a career. Analysis of data from both soldiers and their spouses show that these two dimensions exist. In fact, this same pattern had been found in male soldiers married to civilian females, female soldiers married to male civilians, and in dual military couples. The importance of these findings for the Army is that they can be used to guide the development and modification of family programs.</p> <p>Soldier ratings of internal adaptation are related to soldier ratings of work stress whereas soldier ratings of external adaptation is more related to soldier morale and willingness to remain in service. Research has shown that the most potent method of increasing external adaptation is by increasing the perceived level of support for families within the soldier's unit. Also, research has shown the Army already has some innovative family support programs functioning at the unit level which should have a positive impact upon not only family functioning, in general, but also the levels of family violence/abuse in particular. Research has also shown how proper marketing and service integration can improve all family services whether they are delivered at the unit level or within a family services center.</p> <p>The purpose of this effort was to see if a pilot program could be designed which would enable the Army Community Service (ACS) agency to focus more resources on external family adaptation through unit based programs. A second purpose was to gather the information necessary to test the effects of such unit based programs on family functioning, in general, and upon levels of family stress and social isolation which are associated with rates of family violence and abuse.</p>	
<p><b>Objectives:</b> The effort had four objectives: (1) design a pilot program that can be used by ACS center personnel to increase the adaptation of families to the stresses of Army life; (2) teach the ACS professionals how to use it; (3) evaluate whether the program is being used; and (4) collect baseline data which can be used in a subsequent effort to test program effectiveness. An area of particular interest here was how these proposed changes would affect levels of family violence and neglect.</p>	
<p><b>Status:</b> Completed (December 22, 1993-December 21, 1994)</p>	
<p><b>Results:</b> Lessons learned about the ACS unit program from the pilot tests were as follows: (1) the role of the unit services coordinator (USC) needs to be clearly stated and discussed; (2) the ACS director and the USCs must be clear about what the unit program can and cannot do for the unit; (3) spending a great deal of time in the unit is not necessary; (4) there are management difficulties when trying to establish a mini-ACS out in the unit; (5) the unit program changes how Commanders think of ACS; and (6) soldiers and families have an increased awareness and understanding of ACS. Lessons learned about cross-training from the pilots included: (1) the unit program manual should be used to identify key cross-training points; (2) training on the USC role and its responsibilities needs to be done prior to cross-training; (3) ACS staff are often surprised about how much there is to know about the various programs; (4) being well-informed about ACS helps in gaining the confidence of the unit; (5) training and cross-training must be ongoing; and (6) some cross-training should also be given to ACS staff who are not in the USC roles. Lessons learned about unit orientation from the pilots: (1) talking Army language is key to building confidence in the units; (2) mission support means understanding their mission; (3) time spent in unit orientation is valued by ACS staff; and (4) ACS Directors often overestimate staff knowledge of the Army system. Lessons learned about team-building from the pilots: (1) teamwork is improved when time is set aside for USCs to share their experiences with one another; (2) teamwork helps reduce the stress of added job responsibilities; (3) an effective referral system requires teamwork; (4) failing to consider how problems will be solved as the Unit Program is established works against ACS staff morale; and (5) being informed about the unit and its mission is important for gaining unit confidence. Lessons learned about monitoring from the pilots included the findings that staff review of forms increases acceptance, forms should be kept simple, and referrals and unit services must be tracked. Key implementation lessons learned from the pilots: (1) involve all ACS staff in planning; (2) get senior leadership support; (3) take time to prepare; (4) know your units; (5) phase-in unit consultation; and (6) meet regularly to share experiences.</p>

<b>DO# 0013</b>	<b>Title:</b> Support for Review of Army Occupational Survey Program
<b>Program Area</b> <b>QR</b> <u>  X  </u> <b>AOS</b> <u>      </u> <b>MT</b> <u>      </u>	<b>DO-COR:</b> Dr. Michael G. Rumsey <b>DO-ACOR:</b> <b>Project Director:</b> LTG (R) John S. Crosby <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> The Army Occupational Survey Program (AOSP) "is a system of collection and computer-assisted processing, storage, retrieval, and analysis of detailed training and occupational information. This information is used for officer and enlisted specialties and military occupational specialties and is collected by administering questionnaires to specialty or MOS job incumbents and supervisors or subject matter experts throughout the world" (Army Regulation 611-3, p.1-1).</p> <p>"The AOSP is designed to support and evaluate Army programs in the following areas:</p> <ul style="list-style-type: none"> <li>(1) classification</li> <li>(2) specialty or MOS development and modification</li> <li>(3) quality training requirements</li> <li>(4) assignment policies and use of personnel</li> <li>(5) evaluation tests or systems</li> <li>(6) personnel retention" (Army Regulation 611-3, p.1-1).</li> </ul>	
<p><b>Objectives:</b> The objective of this work was to provide ARI with information and suggestions that it could use as a basis for developing recommendations regarding the most appropriate organization, missions, and functions of the AOSP.</p>	
<p><b>Status:</b> Completed (January 7, 1994-July 6, 1994)</p>	
<p><b>Results:</b> Information was collected primarily from interviews with over fifty senior AOSP-related leaders, users, program managers, and administrators. Five options were evaluated: (1) eliminate the AOSP, (2) retain the AOSP, improving its management and execution using technology, (3) retain the AOSP, downsizing the current organization and contracting out some functions, (4) reorganize and resource program to meet needs of all Personnel Life Cycle functional areas, and (5) move toward a joint program with the Air Force. Based on the information collected, it was concluded that the products of AOSP have great potential utility, beginning with the training function, where most of the current program effort is focused. To realize the full potential of the program, however, will require a radical change to the current program and innovative use of technology to enhance program delivery and utilization of results.</p>

<b>DO# 0014</b>	<b>Title:</b> FY 1993 Population Representation in the Military Services Report (POPREP93)
<b>Program Area</b> <b>QR</b> <u>  X  </u> <b>AOS</b> <u>      </u> <b>MT</b> <u>      </u>	<b>DO-COR:</b> Dr. Ronald B. Tiggie <b>DO-ACOR:</b> Major Dana Lindsley <b>Project Director:</b> Ms. Monica Gribben  <p style="text-align: center;"><b>DO Summary</b></p>
<p><b>Problem:</b> Each year, the Office of the Assistant Secretary of Defense (Personnel &amp; Readiness) [OASD/P&amp;R] publishes a congressionally-mandated report, <u>Population Representation in the Military Services (POPREP)</u>. The POPREP provides detailed data on enlisted and officer recruiting and retention. These data include demographic, educational, aptitude, and socioeconomic characteristics of applicants, new recruits, and enlisted and officer members of the Active and Reserve Components.</p> <p>The POPREP is distributed to a diverse audience within the Department of Defense and the Executive and Legislative branches (including members of the Congress, high-level DoD policymakers, the Services, and the military manpower community) as well as military manpower researchers. Prominent uses of the data are: A source of information to members/committees of Congress; a foundation for addressing congressional committee actions; a basis for budget/legislative changes; a resource for Service research communities and the general public; and an element for military readiness estimates.</p> <p>The intended audiences need the report to locate specific population representation information such as marital status by Service, by gender, and by age. Readers also use the report to find clearly stated analyses of military manpower and personnel issues with supporting data as documentation of the analyses.</p>	
<p><b>Objectives:</b> The objectives of this effort were to (1) assist in meeting the requirements for collecting, analyzing, and presenting information on characteristics of the enlisted and officer forces; and (2) develop, produce, and distribute the FY 1993 report on <u>Population Representation in the Military Services</u>.</p>	
<p><b>Status:</b> Completed (February 25, 1994-January 31, 1995)</p>	
<p><b>Results:</b> The primary deliverable from the project was a complete analysis of FY 1993 POPREP data, including Active enlisted applicants, accessions, and members; Active officer accessions and officer corps; Reserve enlisted accessions and members; and Reserve officer accessions and officer corps. To provide analyses of trends in the military and comparable civilian populations, the report contains longitudinal data for selected demographic variables.</p>

<b>DO# 0015</b>	<b>Title:</b> Revision of the Army Career Transition Survey (ACTS)
<b>Program Area</b> <b>QR</b> _____ <b>AOS</b> <u>  X  </u> <b>MT</b> _____	<b>DO-COR:</b> Dr. Ronald B. Tiggle <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Janice Laurence <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> ARI developed an exit survey instrument, the Army Career Transitions Survey (ACTS), which is designed to be administered to soldiers who are separating from the Army. In a recent evaluation of the ACTS, Giacalone<sup>1</sup> (1993) raised a number of concerns about the content of the ACTS and the procedures currently being used to administer the survey. Questions about the usefulness to sponsoring organizations within the Army of the data collected were also raised by Giacalone as were issues concerning the representativeness of the survey respondents.</p> <p>The Office of the Deputy Chief of Staff of Personnel (ODCSPER, HRD) subsequently asked ARI to revise the ACTS to insure that it addresses the specific areas of interest to Army planners and policy makers. To accomplish this task, the appropriate Army Commands were interviewed to identify the topics of interests, the items on the current version were reviewed and revised, and standardized administrative procedures were developed for all administration sites.</p>	
<p><b>Objectives:</b> The objective of this project was to provide the Army with a revised exit survey that contains items that address the most important issues of interest to the Army. In addition, to help insure data consistency, completeness, and usefulness, administration procedures for ACTS were revised.</p> <p>This effort was designed to provide retention planners with better information about the reasons that made soldiers think about leaving the Army, and will provide improvements in the methods of monitoring trends and cycles. It was intended to provide recruiting and marketing planners with enhanced indicators of the advice returning veterans are giving the Army's youth market.</p>	
<b>Status:</b> Completed (April 6, 1994-October 31, 1995)	
<b>Results:</b> A revised ACTS was submitted for distribution by ARI.	
<p><b>Bibliography:</b></p> <p>Giacalone, R.A. (1995). <u>Revision of the Leadership Supplement to the Army Career Transitions Survey (ACTS)</u>;</p> <p>Giacalone, R. <b>DO# 0016</b>	<b>Title:</b> Update of U.S. Army Research Institute's Officer and Enlisted Personnel Research Data Bases for 1993 and 1994
<b>Program Area</b> <b>QR</b> <input checked="" type="checkbox"/> <b>AOS</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Dr. Peter M. Greenston <b>DO-ACOR:</b> <b>Project Director:</b> Ms. Lori Ramsey <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> ARI requires periodic updates to a group of data bases that are used to perform policy and behavioral research and analyses of manpower and personnel issues. These data bases are constructed primarily of annual personnel and training data maintained by various offices within the U.S. Army and the Defense Manpower Data Center (DMDC). In order to satisfy these research requirements, it is necessary to add current data to the Officer Administrative Data Base (OADB), the Officer Longitudinal Research Data Base (OLRDB), the Officer Standardized Educational Testing Data Base (OSETDB), and the Enlisted Panel Research Data Base (EPRDB).</p>	
<p><b>Objectives:</b> The objective of this effort was to collect source data files and to update the OADB, the OLRDB, the OSETB, and the EPRDB. The procedures used conform to those described in the existing data base documentation.</p>	
<p><b>Status:</b> Completed (April 8, 1994-June 6, 1995)</p>	
<p><b>Results:</b> The primary deliverables for this project were the 1993-1994 officer and enlisted data bases containing career history data on U.S. Army personnel. The data bases were created in Statistical Analysis System (SAS) and flat file formats. Officer Master File (OMF), Separation Officer Master File (SOMF), and Voluntary Separation Incentive Special Separation Benefit (VSI/SSB) data for 1993 and 1994 were incorporated into the Officer Longitudinal Research Data Base (OLRDB) and into the Officer Administrative Data Base (OADB); OLRDB Core data were added to the Officer Standardized Educational Testing Data Base (OSETDB); and enlisted master/loss accession, composite, Enlisted Master File (EMF), and VSI/SSB data were included in the Enlisted Panel Research Data Base (EPRDB).</p>	
<p><b>Bibliography:</b>          Ramsey, L.J., &amp; Fertig, K.L. (1995). <u>Update of the U.S. Army Research Institute's Officer Research Data Bases for 1993 and 1994</u>. Study Report 94-9. <b>DO# 0017</b>	<b>Title:</b> Preparing a Book on Computerized Adaptive Testing Version of the Armed Services Vocational Aptitude Test Battery (CAT-ASVAB)
<b>Program Area</b> <b>QR</b> <u>  X  </u> <b>AOS</b> <u>      </u> <b>MT</b> <u>      </u>	<b>DO-COR:</b> Dr. Ronald B. Tiggie <b>DO-ACOR:</b> Dr. Jane Arabian <b>Project Director:</b> Dr. James R. McBride <p style="text-align: right;"><b>DO Summary</b></p>
<p><b>Problem:</b> The Department of Defense undertook a limited implementation of CAT-ASVAB in 1993, and the decision has been made to implement it in all of the Military Entrance Processing Stations nationwide. This implementation of computerized adaptive testing (CAT) is the culmination of a long-range research and development program. The lessons learned in the course of that research program would be invaluable to other organizations, military and civilian alike, that contemplate the use of computerized testing. However, no consolidated documentation of the CAT-ASVAB R&amp;D program exists.</p>	
<p><b>Objectives:</b> The purpose of this effort is to: (1) coordinate preparation of a document that brings together important results from the CAT-ASVAB research and development program in a single volume; (2) edit chapters of the document that are to be contributed by DoD civilian researchers and policymakers; and (3) prepare and edit those chapters of the document that are best contributed by individual researchers from the private sector. The overall objective of this effort will be to produce a camera-ready version of a book on the CAT-ASVAB research and development program, for publication.</p>	
<b>Status:</b> Ongoing (April 18, 1994-1996)

<b>DO# 0018</b>	<b>Title:</b> Exploring Human Dimensions of Battle Command
<b>Program Area</b> <b>QR</b> <u>  X  </u> <b>AOS</b> <u>      </u> <b>MT</b> <u>      </u>	<b>DO-COR:</b> Dr. Stanley M. Halpin <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Joan Markessini <div style="text-align: right;"><b>DO Summary</b></div>
<b>Problem:</b> The Army and the TRADOC Battle Command Battle Laboratory (BCBL) wanted to sponsor a workshop on the human dimension of battle command. It was to include participants from not only TRADOC, but also from the Army War College (AWC) and the United States Military Academy (USMA). The workshop was to address the range of U.S. Army training and education in the area of battle command. The workshop was also to consider the implications of battle command for research and research planning.	
<b>Objectives:</b> The principal purpose of this project was to assist ARI, BCBL, and TRADOC in formulating the implications of battle command for training and education, research, and research planning.	
<b>Status:</b> Completed (May 3, 1994-December 30, 1994)	
<b>Results:</b> A workshop conference was conducted and the results were forwarded to TRADOC, the Army War College, and West Point for comments. The results were summarized in a report of the conference proceedings and a series of four position papers.	
<b>Bibliography:</b> Halpin, S.M. (Editor) (1994). <u>Force XXI Battle Command Conference: Proceedings</u> . Falls Church, VA: CAE-Link.

<b>DO# 0019</b>	<b>Title:</b> Promotion and Professional Development in a Smaller, CONUS-based Army (Phase 1)
<b>Program Area</b> <b>QR</b> <input checked="" type="checkbox"/> <b>AOS</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Dr. Abraham Nelson <b>DO-ACOR:</b> LTC John Swenson <b>Project Director:</b> Dr. D. A. Harris  <p style="text-align: center;"><b>DO Summary</b></p>
<p><b>Problem:</b> The Army is in a period of transition unmatched by any other period in history. Military history records many examples of "build-up to meet threat/build-down when threat no longer exists." The particular concern of this study is the viability of the enlisted promotion and professional development systems in the smaller, CONUS-based Army of the 1990's. These two systems are supported by PCS (permanent change of station) operations and policy. The movement to a smaller, CONUS-based Army will reduce PCS moves. This reduction in PCS may adversely affect both professional development and promotion opportunities.</p>	
<p><b>Objectives:</b> This was Phase 1 of a two phase study effort. The objectives of this study effort were to: (1) discern the impact of a smaller, primarily CONUS-based force on professional development (PD) and promotion opportunities, (2) document policy changes required to sustain PD and promotion opportunities at current rates, and (3) evaluate the effectiveness and efficiency of current promotion and professional development systems.</p>	
<p><b>Status:</b> Completed (May 13, 1994-January 12, 1995)</p>	
<p><b>Results:</b> A model was developed to study the impact of the European drawdown on PCS moves. The model operationalized the mathematical structure defined in the Interim Study Report entitled "A Mathematical Model for Analyzing the Effect of Changes in the Authorized Position Structure on Army Personnel Policies." The model will be used to complete the analyses in Phase 2 of this project.</p>

<b>DO# 0020</b>	<b>Title:</b> Development of Measures for Sinai Peacekeeping
<b>Program Area</b> <b>QR</b> _____ <b>AOS</b> _____ <b>MT</b> <u>  X  </u>	<b>DO-COR:</b> Dr. Michael G. Rumsey <b>DO-ACOR:</b> Dr. Dale Palmer <b>Project Director:</b> Dr. Douglas H. Reynolds <div style="text-align: right;"><b>DO Summary</b></div>
<b>Problem:</b> This project was undertaken at the request of the Chief of Staff of the Army in conjunction with the planned use of members of the Army National Guard and the United States Army Reserve in Sinai peacekeeping operations. Optimal means for selecting candidates for this mission from among those who volunteer were being examined.	
<b>Objectives:</b> The objective of this work was to develop measures of individual peacekeeping performance in the Sinai.	
<b>Status:</b> Completed (May 26, 1994-September 25, 1995)	
<b>Results:</b> Behaviorally-based rating scales and job knowledge tests have been developed and used as performance criteria to evaluate selection measures developed at the U.S. Army Research Institute (ARI). Task and knowledge requirement dimensions to support the job knowledge test were derived from a review of MFO training and doctrine materials. These dimensions were revised and refined through a series of workshops with NCOs previously deployed in the Sinai. Ten peacekeeper dimensions resulted from this effort and form the basis for a set of behaviorally-based performance rating scales. These measures were administered in the Sinai in May, 1995, and a set of scores were developed against which the predictor tests may be validated.

<b>DO# 0021</b>	<b>Title:</b> Longitudinal Research on Officer Careers (LROC)
<b>Program Area</b> <b>QR</b> _____ <b>AOS</b> <u>  X  </u> <b>MT</b> _____	<b>DO-COR:</b> Dr. Guy Siebold <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Rodney A. McCloy <div style="text-align: right;"><b>DO Summary</b></div>
<b>Problem:</b> The U.S. Army Research Institute (ARI) initiated a program of research on officer careers and career decision-making. As part of the program, ARI developed survey instruments and a longitudinal database on junior Army officers under the title "Longitudinal Research on Officer Careers (LROC)". It was decided to transition LROC into an operational effort so that it could respond more directly to the operational needs of the personnel and leadership communities.	
<b>Objectives:</b> The purpose of this effort was to assist in transitioning the LROC survey project from a research to an operations environment by (a) assessing the needs of those working in the relevant personnel and leadership operational areas, (b) showing them how analyses of existing LROC data might be carried out to address those needs, and © recommending how the LROC survey might best be designed and used as an operational tool.	
<b>Status:</b> Completed (June 28, 1994-July 31, 1995)	
<p><b>Results:</b>Issues of greatest interest to the interviewed members of the personnel and leadership communities included the following: What impact will the drawdown, the concomitant erosion of benefits, and newfound uncertainties regarding career goals have on officer retention? What motivates officers? Do they know the path/paths to success? Who is likely to cut an Army career short, and why? How and when does commitment to the Army evolve? A key finding was that reports from an operational LROC should be user- and policy-friendly—that is, short (2-5 pages), attractively designed, and issue- or topic-focused.</p> <p>Analyses of the LROC found that 10 sets of LROC survey items were psychometrically acceptable as composites (or scales). An analysis of interindividual change examined whether profiles of scores on the LROC composites over time varied across officers, and if so, whether certain individual characteristics might account for this variation. All composites evidenced significant variation in officer profiles over time. Individual characteristics occasionally helped explain profile mean-level differences but not profile shape. A cluster analysis was also conducted but provided little additional information. Also, an event history analysis was used to address officer retention during the first four years of service. Four models were examined. Three LROC composites and demographic variable were identified as significant predictors of officer retention: (1) Retention Propensity, (2) Characteristics of the Job (a composite comparing military and civilian jobs on such conditions as pay and retirement benefits), (3) Civilian Market Ease of Entry (the perceived ease with which an officer could transition into the civilian job market), and (4) ROTC non-scholarship status (despite higher levels of retention propensity, these officers were more likely to leave than either the ROTC scholarship or USMA commissions, a finding that is likely confounded with service obligation).</p> <p>Regarding design changes for future LROC surveys, key recommendations included (a) eliminating the economic sections of the survey (especially where the data are already available through other means), (b) sending out the periodic survey as often as funding permits, © integrating the survey effort more closely with other surveys or data collection programs, (d) designing the survey to include both longitudinal and "special topics" components, and (e) disseminating the results in brief, focused, user-friendly reports.</p>

<b>DO# 0023</b>	<b>Title:</b> Identifying the Attrition Problem and Its Solutions
<b>Program Area</b> <b>QR</b> <u>  X  </u> <b>AOS</b> <u>      </u> <b>MT</b> <u>      </u>	<b>DO-COR:</b> Dr. Clint Walker <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Janice Laurence <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> After decades of research on the "attrition problem" and numerous ad hoc remedies, Army management still experiences problems with attrition. It has also been evident that some attrition has a positive impact on the Army. Thus there exists the need to generate a generally accepted conceptualization of the "attrition problem" and a coordinated set of remedies that could be responsive to changes in the external environment.</p>	
<p><b>Objectives:</b> The objective of this effort was to prepare a report critically reviewing the literature on the subject of enlisted attrition from the Army. The review was intended to identify, insofar as possible, what the "attrition problem" is and what information is lacking to identify the nature and extent of the problem.</p>	
<p><b>Status:</b> Completed (July 29, 1994-November 28, 1994)</p>	
<p><b>Results:</b> The literature review suggested that the best bets toward solving the attrition problem are to (a) determine the extent of management/policy control at various levels and set guidelines that are appropriate; and (b) enhance the match between the individual and the organization through classification based on biodata/temperament as well as realistic previews of the job, the environment, and the behavior. Finally, concern over attrition by outside parties (e.g., Congress) is not likely to subside. The Army would be in a better position to answer continuing concerns if the causes and codes were tracked by personal characteristics and their interactions were understood. The Army could then account for and explain attrition levels and tradeoffs between attrition and other personnel policies.</p>

<b>DO# 0024</b>	<b>Title:</b> Modeling the Enlistment Decision with Army Communication Objectives Measurement Systems Data
<b>Program Area</b> QR <input checked="" type="checkbox"/> AOS _____ MT _____	<b>DO-COR:</b> Dr. Paul Gade <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Veronica Nieva <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> Within the context of today's downsizing military, interest in the recruiting market remains high. Over two hundred thousand incoming recruits are still needed to fulfill the military's annual active duty mission. Recently there has been concern that the pool of young people interested in joining the military may be shrinking. Anecdotal reports from recruiters indicate increasing difficulty in meeting mission. Annual surveys and recent studies have shown that the level of enlistment propensity among 16 to 24 year old youth has been declining steadily over the past few years. This study was one of several efforts undertaken to attempt to obtain a better understanding of the forces that affect enlistment propensity.</p>	
<p><b>Objectives:</b> The objective of this project was to develop several empirically derived models of enlistment interest and actual behavior using data from a survey conducted in 1987 of a nationally representative sample of young men and their parents called the "Army Communications Objectives Measurement System (ACOMS)." The utility of the Fishbein and Ajzen theories of reasoned action within the context of military recruiting as proposed in the original ACOMS project was also tested.</p>	
<p><b>Status:</b> Completed (July 29, 1994-August 31, 1995)</p>	
<p><b>Results:</b> Four empirical models were developed on Army and military enlistment: a youth model of Army enlistment, a linked youth and parent model of Army enlistment, a youth model of military enlistment, and a combined youth and parent model of military enlistment. The models were developed in several stages, starting from a conceptual model that applied the Fishbein and Ajzen concepts to enlistment intentions and behaviors, through an exploratory analysis of the variables available in the ACOMS survey instrument, to a model building effort that employed structural covariance modeling techniques. In general, these models provide strong support for the general framework presented by the theory of reasoned action and for the survey measures that had been developed for ACOMS to measure variables suggested by the theory, that is, youth attitudes are strongly predictive of youth enlistment intentions and behaviors. Additional findings were (a) strong support for the role of social influence, in particular parental influence, in the enlistment process, and (b) strong predictive relationships between measures of enlistment intentions and actual enlistment behaviors.</p>

<b>DO# 0025</b>	<b>Title:</b> Research Findings on Soldier Selection and Their Implications for Army Policy and Programs
<b>Program Area</b> <b>QR</b> <input checked="" type="checkbox"/> <b>AOS</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Dr. Clint Walker <b>DO-ACOR:</b> Dr. Michael G. Rumsey <b>Project Director:</b> Dr. Deirdre Knapp  <p style="text-align: center;"><b>DO Summary</b></p>
<b>Problem:</b> Considerable research on the selection and classification of enlisted personnel has been conducted and documented in numerous technical reports. A continuing problem for ARI researchers is to assure that relevant research findings are communicated to non-technical Army audiences.	
<b>Objectives:</b> The objective of this effort was to develop a report that reviews what research discloses about soldier selection and classification that can be used by Army leaders, program managers, and policy makers to address Army needs.	
<b>Status:</b> Completed (July 29, 1994-February 14, 1996)	
<b>Results:</b> It was decided that two reports would be produced to better serve ARI's needs. One was an 84-page document that provides considerable historical information and information about a relatively large number of related projects. The other was a shorter, 45-page document that focuses more exclusively on results of the Project A/Building the Career Force research program and closely related projects.

<b>DO# 0026</b>	<b>Title:</b> Intercultural Communication Analysis for Special Forces
<b>Program Area</b> <b>QR</b> <input checked="" type="checkbox"/> <b>AOS</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Dr. Judith Brooks <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Teresa Russell <div style="text-align: right;"><b>DO Summary</b></div>
<b>Problem:</b> The Army Research Institute was asked by the U.S. Army John F. Kennedy Special Warfare Center and School to define the critical performance dimensions of intercultural communication for Special Forces personnel and identify appropriate topics for training.	
<b>Objectives:</b> The objectives of this effort were to define intercultural communication and its important dimensions for Special Forces and link those dimensions to appropriate training topics that need to be addressed, noting gaps in current Special Forces intercultural training programs.	
<b>Status:</b> Completed (September 28, 1994-December 31, 1994)	
<b>Results:</b> The project was conducted in three stages: (1) identifying intercultural communication training topics in the published literature, (2) defining intercultural communication in terms of attributes and performance categories, and (3) tying the performance categories to the content of U.S. Army John F. Kennedy Special Warfare Center and School training courses. A critical incident sorting procedure resulted in a set of eight intercultural communication categories for Special Forces. The eight categories were mapped against training in terms of the level of skill provided. This mapping showed that very few of the current training courses build intercultural communication skills. Once individuals finish their training rotations, they join teams and develop skills as they apply awareness and knowledge gained in training. Training would need to incorporate more hands-on type exercises to further intercultural communication skills training.

<b>DO# 0027</b>	<b>Title:</b> Phase 2: Promotion and Professional Development in a Smaller, CONUS-Based Army
<b>Program Area</b> <b>QR</b> <u>  X  </u> <b>AOS</b> <u>      </u> <b>MT</b> <u>      </u>	<b>DO-COR:</b> Dr. Abraham Nelson <b>DO-ACOR:</b> LTC John Swenson <b>Project Director:</b> Dr. D. A. Harris <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> The US Army is in a period of transition unmatched by any other period in history. The particular concern of this study was the viability of the enlisted promotion and professional development systems in the smaller, CONUS-based Army of the 1990's. These two systems are supported by PCS (permanent change of station) operations and policy. The new Army will require fewer PCS moves. This reduction in PCS may adversely affect both professional development and promotion opportunities.</p>	
<p><b>Objectives:</b> This is Phase 2 of a multi-phase effort. The objectives of this effort were to (1) discern the impact of a smaller, CONUS-based force on professional development (PD) and promotion opportunities, (2) document policy changes required to sustain PD and promotion opportunities at current rates, and (3) evaluate the effectiveness and efficiency of current promotion and professional development systems.</p>	
<p><b>Status:</b> Completed (December 21, 1994-July 19, 1995)</p>	
<p><b>Results:</b> Using a variety of simulation models, the effect of the changing authorization structure on average CONUS time on station, the number of rotational moves, and other variables was analyzed. Alternative methods to offset the effects of the change in billet structure, including changes in OCONUS tour lengths, increases in CONUS to CONUS operational moves, and a combination of the two methods were studied. The policies examined to offset potential CONUS stagnation appeared to be more than adequate. For example, a policy of reducing OCONUS tour length by one year significantly increased rotational moves, and reduced average CONUS time on station, by FY 1998, to below what it would have been had there been no change. Overall, the simulations suggested that the potential problems posed by the change in authorization structure would not be severe, and that policies can be adapted to offset any potentially adverse effects.</p>

<b>DO# 0028</b>	<b>Title:</b> Soldier Selection Database Maintenance
<b>Program Area</b> <b>QR</b> <input checked="" type="checkbox"/> <b>AOS</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Ms. Frances Grafton <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Rodney McCloy/Dr. Scott Oppler <b>DO Summary</b>
<p><b>Problem:</b> Two Memoranda of Agreement between the Director of Military Personnel Management, Deputy Chief of Staff for Personnel and ARI (1985, 1992) outlined the requirement for a research and development effort leading to improvements in the Army's enlisted personnel selection and classification system. This effort was executed primarily through two research efforts, Project A and Building the Career Force. The databases created in these two projects are unique for their coverage of soldier performance and aptitudes, and are needed continuously to address a variety of manpower and personnel issues.</p>	
<p><b>Objectives:</b> The purpose of this task was to provide maintenance activities pertaining to these data bases so that these needs can continue to be met. Maintaining the Project A and Career Force data bases is important so that critical manpower and personnel research questions can be addressed.</p>	
<p><b>Status:</b> Completed (January 5, 1995-November 30, 1995).</p>	
<p><b>Results:</b> The database manager logged on to the National Institutes of Health (NIH) mainframe regularly and checked messages from NIH concerning project data and data tapes scheduled for release. The status of tapes scheduled for release by NIH was changed to prevent their release. Also, Enlisted Master File (EMF) data were processed quarterly. The database manager also trained ARI personnel in EMF data processing.</p> <p>A cross-index was also produced. To facilitate production of the cross-index, the NIH accounts used by the Project A and Career Force projects were cleaned and archived. In some cases, account users were contacted to identify files that he/she would like to keep. SAS programs for individual researchers were downloaded to floppy disks for that researcher to keep.</p> <p>Workfiles were provided to several ARI researchers. In addition, the database manager and consultant responded to requests from ARI researchers and outside researchers for assistance/information concerning the database, location of files (ARI personnel only), analyses (ARI personnel only), and access to the database.</p> <p>In sum, the project made substantial progress in archiving the database and streamlining the data storage procedures while producing documentation that will assist researchers in assessing the content of the database and its capability to support their research efforts.</p>

<b>DO# 0029</b>	<b>Title:</b> FY 1994 Population Representation in the Military Services Report (POPREP94)
<b>Program Area</b> <b>QR</b> <input checked="" type="checkbox"/> <b>AOS</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Dr. Ron Tiggle <b>DO-ACOR:</b> Major Dana Lindsley <b>Project Director:</b> Ms. Monica Gribben <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> Each year, the Office of the Assistant Secretary of Defense (Personnel &amp; Readiness) [OASD/P&amp;R] publishes a congressionally-mandated report, <u>Population Representation in the Military Services (POPREP)</u>. The <u>POPREP</u> provides detailed data on enlisted and officer recruiting and retention. These data include demographic, educational, aptitude, and socioeconomic characteristics of applicants, new recruits, and enlisted and officer members of the Active and Reserve Components.</p> <p>The <u>POPREP</u> is distributed to a diverse audience within the Department of Defense and the Executive and Legislative branches (including members of the Congress, high-level DoD policymakers, the Services, and the military manpower community) as well as military manpower researchers. Prominent uses of the data are: A source of information to members/committees of Congress; a foundation for addressing congressional committee actions; a basis for budget/legislative changes; a resource for Service research communities and the general public; and, an element for military readiness estimates.</p> <p>The intended audiences need the report to locate specific population representation information such as marital status by Service, by gender, and by age. Readers also use the report to find clearly stated analyses of military manpower and personnel issues with supporting data as documentation of the analyses.</p>	
<p><b>Objectives:</b> The objectives of this effort were to (1) assist in meeting the requirements for collecting, analyzing, and presenting information on characteristics of the enlisted and officer forces; and (2) develop, produce, and distribute the FY 1994 report on <u>Population Representation in the Military Services</u>.</p>	
<p><b>Status:</b> Completed (March 3, 1995-February 15, 1996)</p>	
<p><b>Results:</b> The primary deliverable from the project was a complete analysis of FY 1994 POPREP data, including Active enlisted applicants, accessions, and members; Active officer accessions and officer corps; Reserve enlisted accessions and members; and Reserve officer accessions and officer corps. To provide analyses of trends in the military and comparable civilian populations, the report contains longitudinal data for selected demographic variables.</p>

<b>DO# 0032</b>	<b>Title:</b> Modeling the Individual Enlistment Decision
<b>Program Area</b> <b>QR</b> _____ <b>AOS</b> _____ <b>MT</b> <u>  X  </u>	<b>DO-COR:</b> Dr. Peter Legree <b>DO-ACOR:</b> <b>Project Director:</b> Dr. D. A. Harris <div style="text-align: right;"><b>DO Summary</b></div>
<b>Problem:</b> The Office of the Deputy Chief of Staff for Personnel asked the U.S. Army Research Institute (ARI) to identify and evaluate factors influencing the enlistment decision and the propensity to serve in the military. Existing data bases have been primarily developed for other reasons (e.g., to track population trends) and are of limited use in developing a general model of factors influencing the enlistment decision or the propensity for military service. Additional data are required to address and quantify the role of factors that may influence the decision to join the military.	
<b>Objectives:</b> This is Phase I of a three phase effort. The primary objectives of this effort are to develop alternative models of the enlistment decision and to identify, construct, and pilot measures of enlistment propensity and factors that influence the decision process.	
<b>Status:</b> Ongoing (May 18, 1995-October 15, 1996)

<b>Program Area</b> <b>QR</b> _____ <b>AOS</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Dr. Joan Harman <b>DO-ACOR:</b> _____ <b>Project Director:</b> Dr. Deirdre Knapp
<b>DO Summary</b>	
<p><b>Problem:</b> Providing information on manpower and personnel issues to Army decision-and policy-makers is often a complex, dynamic, multi-stage, iterative process. The accuracy and timeliness of information provided to decision makers are of paramount importance in affecting the quality of decisions and policies. Over the next decade, the U.S. Army will experience an increasing requirement to bring individuals into the Army who are trainable in a wide variety of skill areas. To meet and maintain its high quality manpower needs of the 1990's, the Army will have to develop and implement programs that allow it to locate, assess, assign, and use human resources more efficiently and effectively than it ever has before. As new Army policies are being developed to enhance the Army's ability to man the force, the Army needs programs of research and studies that will provide a quick response mechanism to gather and analyze data on the expected or actual short-term effectiveness of those policies.</p> <p>Scientific and technical support services are being used that lead to the development and implementation of programs of research and studies on the expected or actual effectiveness of Manpower, Personnel, and Training (MPT) programs. These efforts are part of ARI's MPT program to man the force by conducting research and studies to improve the Army's ability to recruit, identify, assess, classify, assign, lead, train, and maintain the personnel required for the Army.</p>	
<p><b>Objectives:</b> The objectives of this delivery order are to administer the Contract for Manpower and Personnel Research and Studies (COMPRS) for ARI under firm fixed-priced contracts by managing three inter-related tasks: (1) managing the COMPRS program in accordance with established operating procedures, (2) receiving and processing individual Statements of Tasks from ARI, and (3) managing, reporting project progress, and documenting delivery order completion</p>

<b>DO#0034</b>	<b>Title:</b> Cost Analysis of the Army Career and Alumni Program's (ACAP) Transition Assistance Office (TAO) Services
<b>Program Area</b> QR <u>X</u> AOS _____ MT _____	<b>DO-COR:</b> Dr. Joan Harman <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Mary Ann Statman <b>DO Summary</b>
<b>Problem:</b> In assessing the efficiency and effectiveness of the Army Career and Alumni Program (ACAP) Transition Assistance Office (TAO), ACAP managers required a comparison of government- and contractor-provided TAO services.	
<b>Objectives:</b> The objective of this study was to analyze the effects on program efficiency and costs of outsourcing ACAP's transition assistance services, and of consolidating them with job assistance functions.	
<b>Status:</b> Completed (July 11, 1995-April 11, 1996)	
<p><b>Results:</b> The major finding of this study was that the separate provision of transition and job assistance services is ineffective for the soldier, the unit, and ACAP. It was concluded that outsourcing the transition assistance functions to a private contractor, and consolidating them with the job assistance functions, would reduce ACAP's operational costs and improve the efficiency of the program. The greatest improvements in efficiency can be obtained from the following actions: streamlining the ACAP transition process for the client; combining transition and job assistance counseling jobs; improving the efficiency of the counseling process; and eliminating duplication in outreach and marketing activities, the client intake process, and administrative duties. In addition to identifying more efficient operational procedures, we identified three possible hidden costs of operating TAOs that should be considered in cost-benefit estimates: (1) TAOs have the use of government equipment that may not be available to a contractor; (2) TAOs may use work study students who are paid by the Department of Veterans' Affairs and cannot work for a contractor; and (3) ACAP funds and manages job fairs, functions that are currently excluded from contractor operations. There were also suggestions for reengineering ACAP field offices to improve efficiency and effectiveness: (1) provide initial transition assistance in a large group briefing in all ACAP offices, (2) eliminate duplication in reviewing the preseparation counseling checklist and the Individual Transition Plan, (3) improve ACAP quality assurance procedures and monitoring of customer satisfaction, (4) standardize the client outreach process, and (5) improve communication among ACAP offices.</p> <p>The COR Branch will use these findings to guide decisions concerning outsourcing of transition assistance services and consolidating them with job assistance services. The findings can also be used to improve the efficiency and effectiveness of ACAP by reengineering several processes irrespective of privatization. Other military decision makers can use the approach and results of this study to assess the potential for outsourcing in-house government functions in their organizations and to assist in planning and implementing a privatization effort.</p>

<b>DO# 0035</b>	<b>Title:</b> Optimal Reserve Recruiting Model (ORRM)
<b>Program Area</b> <b>QR</b> <input checked="" type="checkbox"/> <b>AOS</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Dr. Peter Greenston <b>DO-ACOR:</b> Dr. Robert Wegner (U.S. Army Recruiting Command) <b>Project Director:</b> Dr. Peter McWhite <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> U.S. Army Recruiting Command's (USAREC) recruiting force consists of approximately 1,500 USAR and 5,000 Regular Army (RA) recruiters. These personnel are located in over 2000 recruiting stations of which about 1300 are shared by the USAR and RA. In jointly manned stations nearly 80 percent have one USAR recruiter, 20 percent have two, and only one percent have three. USAREC is faced with the management problem of allocating its USAR recruiters among the recruiting stations in a manner that will maximize enlistments (mission achievement) and simultaneously fulfill local USAR units accession requirements.</p>	
<p><b>Objectives:</b> This study has two objectives: (1) Develop recruiting costs that estimate the amount of time it takes recruiters to access nonprior service (NPS) candidates and to transfer prior service (PS) members of the Individual Ready Reserve (Tasks 2-3) and (2) Develop an ORRM that uses each recruiting battalion's candidate demographics, propensity, staffing, etc., to calculate a standardized man-hour cost of recruiting NPS and PS mission boxes (Tasks 5-6).</p>

<b>Program Area</b> QR <input checked="" type="checkbox"/> AOS <input type="checkbox"/> MT <input type="checkbox"/>	<b>DO-COR:</b> Dr. Clinton B. Walker <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Mary Ann Statman <div style="text-align: right;"><b>DO Summary</b></div>
<b>Problem:</b> The U.S. Army Research Institute for the Behavioral and Social Sciences (ARI) is currently engaged in an effort to improve the efficiency and effectiveness of the Army Occupational Survey Program (AOSP). One component of this effort is to improve occupational analysis processes and products.	
<b>Objectives:</b> In 1994 Statman, Gribben, Harris and Hoffman proposed and tested a new approach to occupational cluster evaluation (OCE). The primary objective of the present project is to evaluate and prepare one of the cluster evaluation steps in the OCE method for importation into the data analysis capacity of the AOSP. The addition of a cluster evaluation method to the AOSP will improve the quality and usefulness of the data for AOSP users and expand the range of analyses delivered.

<b>DO#0039</b>	<b>Title:</b> Application of Speech Recognition to Special Operation Forces' (SOF) Language Sustainment and Enhancement Computer-Based Training (CBT)
<b>Program Area</b> <b>QR</b> <input checked="" type="checkbox"/> <b>X</b> <input type="checkbox"/> <b>AOS</b> <input type="checkbox"/> <b>MT</b> <input type="checkbox"/>	<b>DO-COR:</b> Dr. Melissa Holland (ARI) <b>DO-ACOR:</b> <b>Project Director:</b> Dr. David H. Hannaman <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> The Special Operations Command (SOCOM) needs to sustain and enhance the foreign language skills of Special Operations Forces (SOF) personnel, and provide a capability for rapid familiarization of a specific foreign language prior to deployment of SOF units. However, conventional classroom training to exercise speaking skills is available only at widely spaced intervals and at central locations that require SOF personnel to leave their units. Therefore, there is a need to produce courseware that can be used by SOF personnel to acquire, sustain, and enhance their foreign language speaking skills at their units' location. Computer-based training (CBT) has been present in SOF units for some time (used to teach reading and listening skills), but has not used speech recognition technology which is necessary to teach speaking skills.</p>	
<p><b>Objectives:</b> The objective of this project is to develop a speech interactive version of the Military Language Tutor (MILT) by expanding its existing microworld software to include more functions of use to SOF and to incorporated speech input. A commercial off-the-shelf (COTS) speech recognition technology will be modified to be capable to treat modern Standard Arabic (MSA), a language of proven difficulty and criticality to SOF. Additionally, MILT's microworld functions will be expanded to include the ability for users to move through multiple scenes or settings, and the ability for courseware authors to reconfigure scenes.</p>

<b>DO#0042</b>	<b>Title:</b> Survey of Officer Careers (SOC) - Phase I
<b>Program Area</b> <b>QR</b> _____ <b>AOS_X</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Dr. Morris Peterson <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Rodney McCloy <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> The U.S. Army Research Institute (ARI) initiated a program of research on officer careers and career decision-making. As part of the program, ARI developed survey instruments and a longitudinal database on junior Army officers under the title "Longitudinal Research on Officer Careers (LROC)". It was decided to transition LROC into an operational effort so that it could respond more directly to the operational needs of the personnel and leadership communities. The operational survey is the Survey of Officer Careers (SOC). A primary goal of the SOC is to provide timely, policy-relevant information on officer careers to top Army personnel (e.g., decision makers, policy makers).</p>	
<p><b>Objectives:</b> The objective of this project is to analyze the data collected by ARI to identify and report on the current status and trends in officer careers, including a longitudinal sub-sample. The findings are important for helping the U.S. Army understand what happens to officers during their careers, and the types and extent of impacts that events, behaviors, and attitudes/opinions have on officer careers and their plans for their careers. Two phases are required to complete all of the required work. The objectives of this Phase I effort are to provide current information on the concerns of officers about their professional careers by analyzing the data from the <u>1996 Survey of Officer Careers (SOC)</u>; provide longitudinal analysis for identifying trends, using a master LROC data base (prepared under COMPRS Delivery Order 0021) which includes the 1996 SOC survey and the 1988, 1989, 1990 and 1992 <u>Longitudinal Research on Officer Careers (LROC)</u> surveys; identify changes in officer behaviors, attitudes/opinions, and characteristics occurring since 1988; and produce a series of special reports (four during Phase I, eight during Phase II) and briefings to facilitate distribution of the findings of the surveys.</p>	
<p><b>Status:</b> Ongoing (February 28, 1996 - February 27, 1997).</p>

<p><b>Planned Documents and Products:</b>          Project database, database codebooks, instructions for database maintenance, list of 20 special topics, four Special Topics reports.</p>	

<b>DO# 0043</b>	<b>Title:</b> Problem Solving Strategies for Leadership Instruction
<b>Program Area</b> <b>QR</b> _____ <b>AOS</b> _____ <b>MT</b> <u>  X  </u>	<b>DO-COR:</b> Mr. Robert Solick <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Deirdre Knapp/Dr. Julia Pounds <b>DO Summary</b>
<b>Problem:</b> The ARI Research Unit at Ft. Leavenworth, KS has been investigating the individual and situational factors influencing the use of various problem solving strategies used by leaders. A data base of 80 problem solving protocols is available for analysis.	
<b>Objectives:</b> The objective of this project is to analyze the problem solving data base and produce a report on the situational determinants of problem solving strategy effectiveness and provide recommendations for instructing leaders of problem solving groups.	
<b>Status:</b> Ongoing (February 28, 1996-September 28, 1997)

<b>DO#0044</b>	<b>Title:</b> Graphical Displays for Providing Feedback on the Leader Azimuth Check
<b>Program Area</b> <b>QR</b> <input checked="" type="checkbox"/> <b>X</b> <b>AOS</b> _____ <b>MT</b> _____	<b>DO-COR:</b> Mr. Robert Solick <b>DO-ACOR:</b> <b>Project Director:</b> Mr. Jeff Barnes <div style="text-align: right;"><b>DO Summary</b></div>
<p><b>Problem:</b> The Leader Azimuth Check (AZIMUTH) is a behavior questionnaire developed to provide self assessments and observations from peers, superiors, and subordinates. It was created to assist in self-development in various leader competencies. Research is underway to evaluate the utility of the instrument for assessing direct, organizational, and strategic levels of leadership in military organizations. To provide feedback to participants in a timely manner, ARI requires the development of automated processing and reporting programs for AZIMUTH.</p>	
<p><b>Objectives:</b> The objective of this effort is to develop computer programs and associated data handling procedures for scoring instruments, computing norms for reference groups, and for preparing individual feedback reports. The feedback reports will include attractive and interpretable graphical displays showing an individual's results compared to those of the appropriate reference group(s). The programs and procedures must be adaptable to changes in (a) the reference group, (b) in the degree of assessment (i.e., data may not always be from superiors or from subordinates, and the number of peers or subordinates may vary across individuals), and © scoring procedures. Scoring procedures may change as new factor analyses result in new weights being assigned and/or as new items are added and old ones deleted during the refinement of the instrument. This work is sponsored by ARI's Ft. Leavenworth Research Unit.</p>	
<p><b>Status:</b> On-going (May 29, 1996 - September 30, 1996)</p>

<b>DO# 0045</b>	<b>Title:</b> The U.S. Army Research Institute's Reserve Component Manpower, Personnel, and Training Work Program: Product Review and Future Directions
<b>Program</b> <b>Area</b> <b>QR</b> _____ <b>AOS</b> _____ <b>MT</b> <u>  X  </u>	<b>DO-COR:</b> Dr. Joseph Hagman <b>DO-ACOR:</b> Dr. Ruth Phelps <b>Project Director:</b> Dr. Douglas H. Reynolds <p style="text-align: right;"><b>DO Summary</b></p>
<b>Problem:</b> A current need exists to organize and document ARI's Reserve Component (RC) related research findings and products and to determine their potential impact on RC manpower-, personnel-, and training-related decisions.	
<b>Objectives:</b> The objective of this work is to (a) review and document all manpower-, personnel-, and training-related research findings and products reported and/or developed by ARI since 1980; and (b) identify and elaborate upon specific high-priority RC issues in need of future research, development, test and evaluation, and/or study and analysis over the next ten years.

<b>DO#0046</b>	Title: Assistance in Designing a Selection and Assignment Technology Demonstration
<b>Program Area</b> <b>QR</b> <input checked="" type="checkbox"/> <b>X</b> <input type="checkbox"/> <b>AOS</b> <input type="checkbox"/> <b>MT</b> <input type="checkbox"/>	<b>DO-COR:</b> Dr. Jacinto Silva <b>DO-ACOR:</b> <b>Project Director:</b> Dr. Mary Ann Statman <div style="text-align: right;"><b>DO SUMMARY</b></div>
<b>Problem:</b> The Army has spent over a decade developing improved selection and assignment procedures. It is necessary to demonstrate that the various components of an improved selection and assignment system can have substantial value to the Army.	
<b>Objectives:</b> The objective of this project is to assist the Army Research Institute (ARI) in designing and conducting research to determine the value of improvements in new procedures for selecting and assigning applicants for Army enlisted service.	
<b>Status:</b> Ongoing (May 30, 1996-January 15, 1997)

Appendix A  
ARI COMPRS Program Descriptions

### **Quick Reaction (QR) Program**

**Applicable Areas.** The QR program is intended to give ARI a quick-response capability to perform short-term research or studies and analysis dealing with manpower and personnel issues for which the necessary in-house capability is not available. The QR Program may only be used for the procurement of non-personal services to perform the tasks specified in the DO, subject to the limitations set forth below.

**Conditions.** Because this program is intended to resolve manpower and personnel issues that can be studied in a short time, the following conditions will normally apply:

- Each of the QR Program DOs shall be completed within the period of time specified in the DO, with the maximum allowable completion normally being within a 12-month period from the date of the DO.
- Each task of the DO shall be completed by HumRRO or its subcontractor within the total time allocated and a final report prepared and delivered.
- Unless otherwise stated in the DO, the tasks to be performed by the Contractor shall include a meeting with ARI at Alexandria, Virginia or at an ARI Field Unit at the start of, and at the completion of, each of the QR Program DOs.

### **Attitude and Opinion Survey (AOS) Program**

**Applicable Areas.** The AOS program is intended to give ARI the ability to conduct surveys to provide information for accession and force management decision-making. This information can only be obtained through surveys of the target populations and may require updating due to changing population dynamics and attitudes in the various population segments.

**Conditions.** Because this program is intended to provide information quickly to resolve manpower and personnel issues, the following conditions shall normally apply:

- Each of the AOS efforts shall be completed within the period of time specified in the DO, with the maximum allowable completion normally being within a 12-month period of the date of the DO or an 18-month period if Office of Management and Budget (OMB) approval is required. Each AOS survey shall be performed using standard random sampling procedures or other appropriate sampling techniques.
- The tasks written by the Government in each AOS Program SOT shall include a statement of the target group for the survey. A target group may be defined as, for example, all males, age 16-21 years old, in high school or graduated, and having positive propensity to enlist in any military service. The Contractor shall prepare as part of its response to the SOT, the necessary screening and sampling methodologies to assure that the target group requirements are met.

- If specified in the SOT and subsequent DO, the Contractor shall prepare a survey instrument. The Government may, at its discretion, construct a proposed survey instrument and submit it to the Contractor for review and recommended changes. The approved survey instrument shall be administered by the Contractor to the target population, or a sample thereof. All reproduction, survey administration, analysis, and report generation costs shall be included in the Contractor's RFDO for an AOS survey.
- The ability to conduct surveys under the AOS program may depend on ARI obtaining OMB approval to collect the information from the public. If OMB approval is required, and if such approval is not obtained, the survey shall not be conducted. The Contractor will be notified by the Government of the status of OMB approval. Surveys involving military personnel do not require OMB approval. ARI will make the determination of approval authority prior to an SOT being issued and will clearly state in the SOT if survey administration is contingent upon any other approval authority.
- When the final survey instrument is received by the Government, it may be necessary for the DO COR to submit the survey instrument to OMB for approval. The approval process may require from four to six months. Part of the OMB submission is a detailed description of the sampling plan, including burden hours, sampling methodology, non-response analysis, etc. The Contractor shall prepare the necessary documentation in accordance with the SOT and DO requirements and submit it to the DO COR who will submit it through agency channels.
- Each DO task shall be completed by the Contractor within the time allocated and a final report delivered. The final report shall contain copies of any appropriate verbatim responses of survey participants. Unless otherwise stated in the DO, the tasks to be performed by the Contractor shall include a meeting with ARI in Alexandria, Virginia or other ARI Field Unit locations at the start of, and at the completion of, each AOS DO.
- At all times the contractor will protect the confidentiality of the survey responses.
- If OMB approval is not received, the Contractor will be paid only for those tasks in the DO which are completed, and which do not require an approved survey instrument. Each AOS DO will usually contain at least two phases as follows:

Phase I. **Preparation.** The tasks under Phase I will be the review or development of survey instruments, sampling methodology, preparation of approval packet (if required in the DO), and other items necessary for preparation of the survey administration.

Phase II. **Survey Administration, Analyses, and Reporting.** Upon receipt of survey approval, Phase II will involve the tasks necessary to conduct the survey, compile and analyze the data, prepare reports, and conduct in-person presentation of results (if required in the DO). Phase II shall always be contingent upon receipt of proper approval. If such approval for the survey is not obtained, Phase II will

not be authorized and no payment for any tasks under Phase II will be made to the Contractor.

### **Medium-Term (MT) Program**

**Applicable Areas.** The MT Program is intended to give ARI the ability to conduct a limited number of research or studies and analysis efforts whose duration would not normally exceed 24 months after HumRRO receives a DO. The MT program may only be used for the procurement of non-personal services to perform the tasks specified in the DO, subject to the limitations set forth below.

**Conditions of MT Program.** This program is intended to resolve problems associated with manpower and personnel issues which require a somewhat longer period of performance than the QR program. The following conditions shall normally apply:

- Each of the MT efforts shall be completed within the period of time specified in the DO, with the maximum period normally being 24 months from the date of the DO.
- Each task of the DO shall be completed by the Contractor within the total time allocated and a final report delivered. Unless otherwise stated in the DO, the tasks to be performed by the Contractor shall include a meeting with ARI, in Alexandria, Virginia or at ARI Field Units, at the start of, and at the completion of, each MT Program DO.
